Category: other-general

Telecomm Project Engineer

Overview of Position:

The Telecom Project Engineer designs solutions for projects including VSAT technology plus (but not limited to) the following telecommunications sub-systems : LAN, WAN, Wireless Networks, Entertainment Video-Audio, IPTV, TVRO, CCTV, Digital Signage, Radar, Radio – VHF/UHF (2-Way, Trunking Repeater, Aviation, Marine), PAGA, PBX, VoIP, Satellite Phone, Fiber Optic and Copper Structured Cable Systems, MDF-IDF, UPS, Microwave, Weather systems, Personnel-Vehicle Tracking and Access Control systems. This position will be based in Mozambique supporting a customer directly in 3 distinct locations. This position will be on a rotation schedule (TBD) working 2 or 4 weeks on/off, however subject to change based on customer requirements.

The Telecomm Project Engineer works closely with the Program/Project Manager and oversees the design, development, and implementation of a customer focused solution, based on specific requirements defined within a project plan and contract. They will be responsible in the day to day operations/maintenance of defined Telecom Systems within each of the customer locations. They also assist the Program/Project Manager in qualifying and gathering resources needed to complete the technical work package.

What you will do:

Define, develop, oversee and coordinate all design related activities defined within the scope of the project.

Provide technical/analytical guidance to project team both internal departments and clients.

Manage local work with other Telecom Technicians in scheduling field service dispatches and maintenance activities.

Assist to develop and monitor detailed work plans, work schedules, project estimates, resource plans, budgets, and status reports from initiation through delivery.

Assess project issues and develop resolutions to meet productivity, quality, and client-satisfaction goals on a daily basis.

Interface with functional peer groups, management and/or outside customers by gaining cooperation of others, conducting presentations of technical information concerning specific projects/schedules, etc.

Direct the design of projects and interface with the drafting department to ensure that all engineering parameters, needs, and client requirements are being fulfilled on a timely basis.

Manage the integration of vendor tasks, track, and review vendor documentation deliverables.

Interface with customers on technical matters on a regular basis.

What we need from you:

Bachelor's degree in engineering (or 5+ years of applicable work experience)

Hands-on experience with VSAT, Microwave, Two Way Radio communication, CCTV, Access Control IPTV and/or Navigational Electronic Systems.

Basic knowledge of LAN Structure.

Some experience in IP network design and implementation using CISCO and other vendor equipment.

Intermediate to Expert knowledge of RF technologies to include 2-Way radio systems, VSAT, TVRO, Microwave and Wi-Fi.

A Basic understanding of design and configuration using fiber optics and structured

cabling.

Able to effectively manage multiple projects and function with minimal supervision.

Demonstrate strong understanding of concepts and issues across functional lines.

Self-starter: seek out potential issues that aren't readily apparent

About Speedcast

Speedcast has successfully completed its restructuring process and emerged from chapter 11 proceedings under the ownership of Centerbridge Partners, L.P. Following Centerbridge's USD \$500 million equity investment in the company, Speedcast now has a clean balance sheet with no secured debt and a healthy cash balance, optimally positioning it as a stable, long-term partner for its employees, customers and vendors.

About Centerbridge Partners, L.P.
